VERDE mezzo

Sustainable Design Meets High Performance

When developing the VERDE series video magnification systems, we placed a strong focus on environmental responsibility and the careful use of resources and materials.

Working closely with TÜV Hessen and other partner companies, we optimized our development, production, and recycling processes. The result is VERDE – a high-quality video magnification system designed to be particularly environmentally friendly.

Approximately 66% of the components used in VERDE are made from recycled materials. In addition, state-of-the-art LED technology for both illumination and the monitor ensures exceptionally low energy consumption.

At the same time, the VERDE series is manufactured to the highest standards of quality, reliability, and functionality.

A VERDE system therefore offers clear advantages: it provides excellent support for everyday reading and writing tasks, while also contributing to the protection of our environment.

The VERDE series – Good for the environment

- Around 66% recycled materials and components are used in the VERDE systems.
- Development and production processes optimized with environmental considerations in mind.
- Very low energy consumption thanks to the latest LED technology used for both lighting and the monitor.
- Through the conscious use of functionally flawless materials with minor visual variations, we promote a more sustainable and responsible use of resources.
- Some units are shipped in previously used but fully functional packaging to further reduce environmental impact.

VERDE mezzo

The compact VERDE mezzo video magnifier impresses with razor-sharp, high-resolution images and excellent ease of use. The HD camera delivers outstanding image quality with minimal image noise and reduced reflections from glossy surfaces. The high-resolution LED flat-screen monitor can be adjusted smoothly for optimal viewing. When required, the VERDE mezzo can be folded down and easily transported, making it a flexible solution for everyday use.

Your benefits at a glance:*

- magnification up to at least 40x**
- reading table (XY table) with braking function
- comfortable reading position thanks to height-adjustable and tiltable monitor
- at least HD resolution
- autofocus can be switched off
- true-color and high contrast-color display modes: F F F F F
- reading line guide and masking
- LVHD technology for high-quality images with minimal image noise

order codes:

19" monitor (with locking lever)	**VERMEZ01**
19" monitor	**VERMEZ20**
22" monitor (no spring mechanism)	**VERME22L**
22" monitor	**VERMEZ22**

**depending on the camera and monitor, the magnification can range from 1x to 100x
