MANO 6

The fullHD hand-held magnifier in wide-screen format

product video

MANO 6 is equipped with a high resolution touch display as well as with four tactile buttons for easy and comfortable operation. In addition, magnification level can be adjusted and the image can be scrolled by zoom gestures with your fingers. By means of the tactile buttons at the right and the left hand side of the display, different contrast modes, magnification levels and be adjusted and pictures can be taken.

With a height of only 3.5" MANO 6 sits well in your hand. Due to the widescreen format, the reading flow is not interrupted because even at a high magnification level you can view several letters at the same time.

MANO 6 turns ON automatically when you fold out the stand. You can now place the magnifier on top of your reading template and start reading in an ergonomic reading angle.

Alternatively, you can also use the handle, e.g. to have a closer look at price tags while shopping. An upholstered bag protects MANO 6 from damages on the go.

Your benefits at a glance

- intuitive operation with only four buttons and 5.5" touch display
